Collected Knowledge & Wisdom on

Climacell

Provides:

This API provides access to real time weather and forecasts for up to the next two weeks.

Key Provisioning: **Pain factor** (*0=ezpz...5=nightmare*): `2`

- Navigate to Climacell's API website, and create an account. <u>This link</u> will take you directly to the create account page with the Free Plan selected.
- Navigate to the User Dashboard to find the API token.

Quotas:

- 1,000 requests/day

The Good:

- Can restrict the parameters to allow for faster response times
- EXTREMELY comprehensive in terms of data returned
- Compatible with latitude and longitude coordinates

The Bad:

- JSON can be a bit much to sift through, but can be mitigated by restricting parameters
- Runtime may be a little slow, but can be mitigated by restricting parameters

The Ugly:

- The free version is actually a trial, requiring you to switch accounts every two months if you don't want to pay
